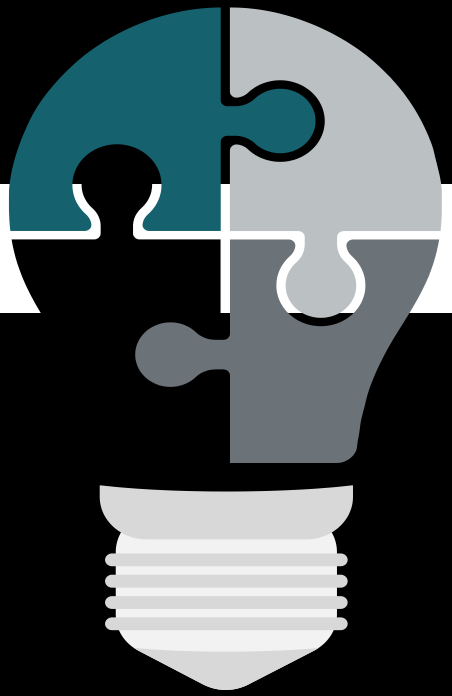
AI Automation Playbook

BUILD THE AI WORKFLOW



# Build an AI Workflow

# INSTRUCTIONS: GETTING STARTED

**Complete** your assignment on the following slides
**Set the share settings** so **anyone with the link** can view the document
**Submit** the link to this deck in the Learning Management System

**Tips for completing your assignment:**

- Rename your copy and add your name to the file
- Example: Playbook Assignment: Automation opportunity scan - MRogers
- Read each slide carefully to ensure you complete the assignment successfully
- Review your playbook before submitting for accuracy, grammar, and spelling
- Keep in mind the Guidelines for AI Use in the Course when completing this assignment

## Watch this video for a quick demo

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# INSTRUCTIONS: Introduction and background

Now that you've seen different examples of AI-powered automations using Make.com, n8n, and Julius.ai, this assignment will walk you through the process of **building and refining an AI-powered automation** that improves efficiency in a business process.

You have two options for completing the playbook:

1. **Use the provided Swift Supply Co. company scenario**
   As with past playbook assignments, you can use the **Swift Supply Co. scenario**, a mid-sized retail and e-commerce company, as a case study with clear workflows that lend themselves to automation. If you choose this option, follow slides 4-34.

2. **Apply it to your own workplace or scenario**
   If you already have a process in mind that you mapped out during your last playbook assignment, you can follow the same structured approach to create a simplified version of the workflow you mapped out. If you choose this option, follow slides 35-46.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# REVIEW: Problem, objective, and task

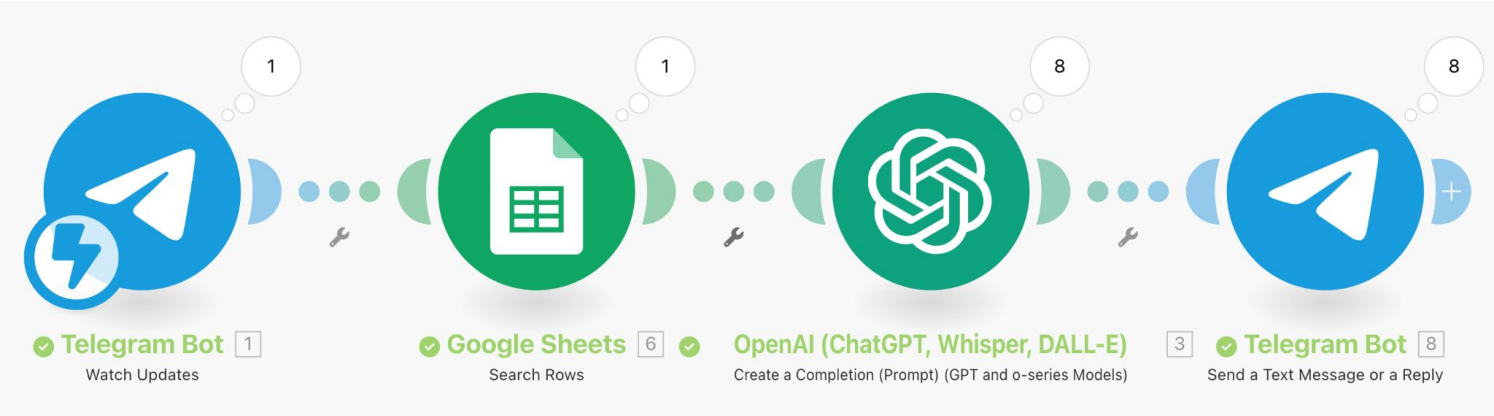
You are an automation expert tasked with creating an automated order tracking system that responds to customer's questions about their orders for Swift Supply Co.

- **Problem:** Swift Supply Co has a warehouse and fulfillment center where they manage customer orders, shipping, and returns. The customer service team is overwhelmed, struggling to manage high volumes of customer inquiries. This results in delayed responses, frustrated customers, and missed business opportunities.
- **Objective:** Your goal is to build an automation on Make.com that connects a Telegram bot, Google Sheets, and OpenAI (ChatGPT) to track orders and provide customers with updates on their order. This automation will help streamline customer support and enhance communication by allowing users to query order statuses easily.
- **Task:** To do this, you'll need to build the workflow in Make.com, test it thoroughly, and deploy it for real-time order tracking. Follow the instructions carefully, and make sure each module in Make.com is configured correctly.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# REVIEW: Workflow overview

You'll create an automated system that functions as a chatbot. The user inputs either their order number or their email address. The chatbot then retrieves order details from Google Sheets based on the user's input in Telegram, generates a response with the help of OpenAI, and sends the response back to the user.



© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# REVIEW: Swift Supply Co's current workflow

**Read this overview slide from the module 1 playbook to refresh on Swift Supply Co's current situation:**

The customer service team is overwhelmed, leading to delayed responses, frustrated customers, and lost business. Agents spend over 40% of their time handling repetitive inquiries, such as order status instead of focusing on complex customer needs. Here's how the customer service team at Swift Supply Co. currently handles customer inquiries about their orders.

1. **Inquiry received (1-2 minutes)**
   - A customer submits a question through email, phone, live chat, or a web form.

⬇️

2. **Inquiry routed (5-10 minutes)**
   - A team member manually checks the inbox or platform and assigns the inquiry to an available agent.

⬇️

3. **Agent reviews request (3-5 minutes)**
   - The assigned agent reads the message and determines the type of inquiry (order status, return request, product availability, complaint, etc.).

**4. Agent searches for information (5-12 minutes)**

The agent looks up information across multiple systems:

- Order tracking system
- Inventory system
- Policy documentation
  - This often requires switching between tabs, copying/pasting order numbers, or checking with other departments.

⬇️

**5. Response drafted and sent (5-8 minutes)**

The agent writes a custom reply, often using boilerplate responses or templates. They may manually attach tracking links or summarize product availability.

⬇️

**6. If complex, escalate (varies: 3-10+ minutes)**

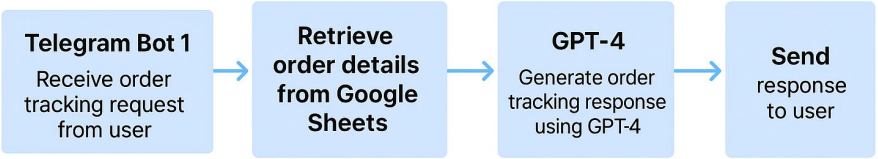
If the request is complex (e.g., complaint, return issue), the agent forwards it to a supervisor or escalations team via email or phone.

**Note:** These time ranges are approximations.

# REVIEW: Process map for the workflow you will build

Here is the process map for the workflow you will build in Make.com. Remember, once you've visualized your process, you're set to build your automation.

## ORDER TRACKING WORKFLOW FOR SWIFT SUPPLY



© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# REVIEW: Deliverables

For this playbook assignment, you will create the following deliverables:

1. **Workflow configuration:** Document the setup steps for Telegram, Google Sheets, and OpenAI in Make.com.
2. **Telegram response template:** Create a template or a sample response that will be sent back to users depending on the status of their order. This should include placeholders for order-specific information like order status, delivery date, etc.
3. **A screenshot of your final workflow in Make.com:** Provide a screenshot of your workflow.
4. **Testing results:** Provide screenshots, logs, or a video walkthrough from testing different user inputs, including successful order tracking and error cases where you don't get the desired output.
5. **Reflection:** Document any challenges you encountered while building and testing the workflow. What did you learn about integrating different tools (Telegram, Google Sheets, OpenAI)?

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# INSTRUCTIONS: Milestones

Though the goal of an automation is to get it up and running, getting it to work is only one piece of the puzzle.

**Here is a checklist of each item you need to complete to consider this assignment complete.**

- ❏ Workflow scenario builder includes all 4 nodes:
  - ❏ Telegram (Watch updates)
  - ❏ Google Sheets (Search Rows)
  - ❏ Open AI (Generate a completion and o1 models)
  - ❏ Telegram (Send a message or reply)
- ❏ Credentials inserted into the following nodes:
  - ❏ Telegram (Watch updated)
  - ❏ Google Sheets (Search rows)
  - ❏ Open AI  (Generate a completion GPT and o1 models)
    - ❏ *API key inserted and works (as listed above under credentials)
  - ❏ Telegram (Send a message or reply)
- ❏ Testing
  - ❏ Tested your workflow and showed that each node works
- ❏ Debugging and troubleshooting[if there are errors]
  - ❏ Looked into credentials and data mapping to configure errors
- ❏ The automation works and the project is complete

***Note:** You should have received your OpenAI API credentials in the course Learning Management System. If you have not accessed your credentials, please contact your Learner Success Advocate.

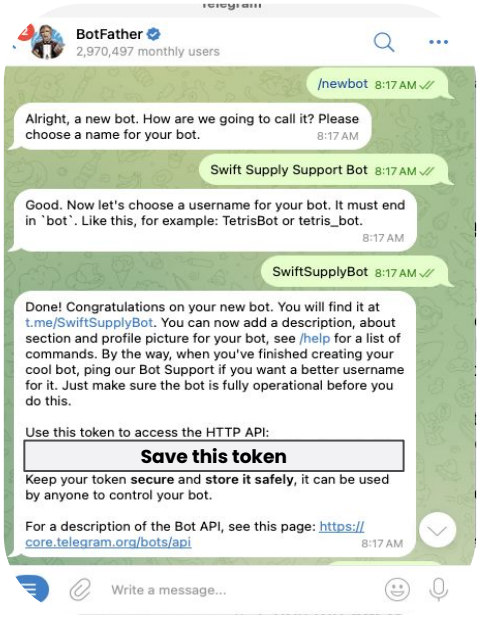
© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# Get started with building the Swift Supply Co. automation

Go to the next slide to get started with your playbook assignment.

# STEP 1: Set up Telegram Bot

1. **Create a Telegram Bot using BotFather**
   - Open Telegram and search for "BotFather" in the search bar.
   - NOTE: If you already have a bot setup while testing the workflows in this module, you can simply use the same one.
   - Or, start a chat with BotFather and send the command: /newbot
   - Follow the instructions to create your bot, including providing a name and username.
   - After completing the steps, BotFather will give you the **API Token** for your bot. Save this token, as you will need it to integrate the bot with Make.com.
2. **Obtain the Bot Token**
   - Save the **API Token** provided by BotFather.



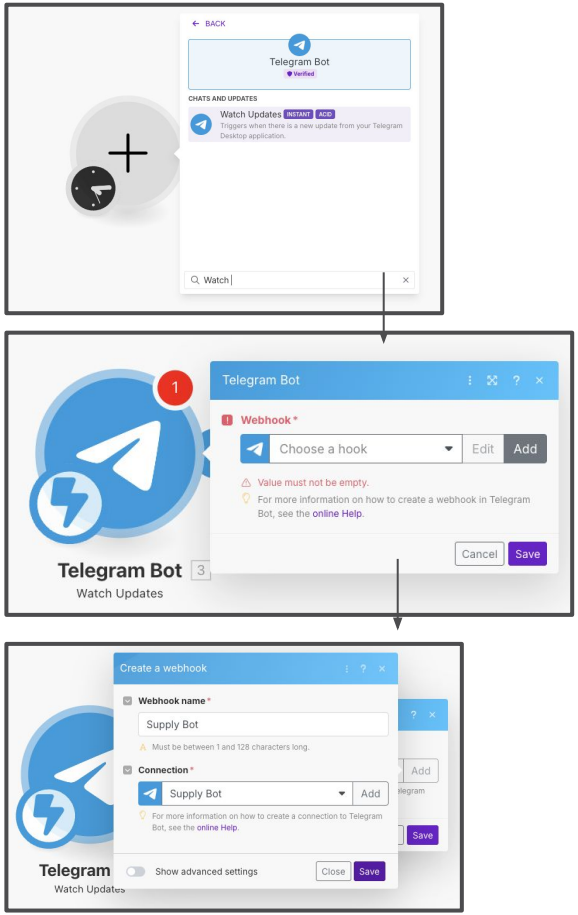
**Install Telegram:** For Telegram setup steps, see this PDF document, Telegram setup. For full Telegram bot setup steps, see this PDF document, Telegram bot set up.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# STEP 2: Integrate Telegram Bot into Make.com

1. **Log into [Make.com](Make.com)**
   - Open Make.com and log in with your credentials (sign up for free if you haven't created one yet)
2. **Create a New Scenario**
   - Click on the **Create a new scenario** button from your Make.com dashboard
3. **Add Telegram to your scenario**
   - Click on **+**, select the **Telegram Bot** app from the list of available apps and choose **Watch Updates**
4. **Connect Telegram to Make.com**
   - Choose the **Telegram Bot** app and select **Add**
   - You will be prompted to enter your **API Token** from BotFather
   - Paste the **API Token** in the required field and click **Continue**

***continued on the next slide***



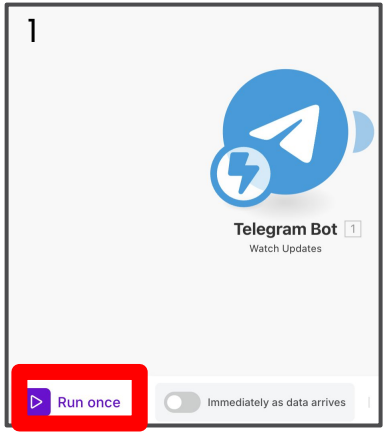
© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

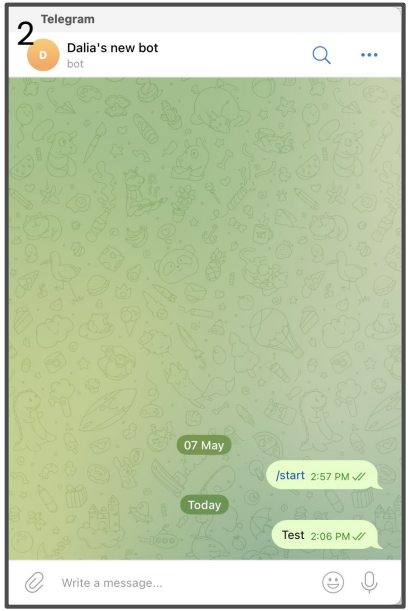
# STEP 2: Integrate Telegram Bot into Make.com

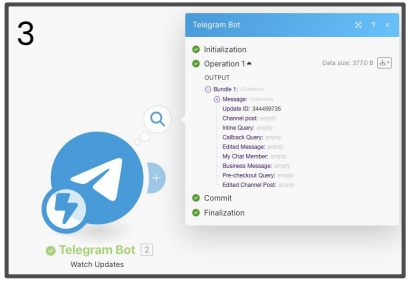
## 5. Test the connection

- After connecting the bot, click on **Run once** to test the connection.
- Send a message to your Telegram bot from the Telegram app to ensure it receives updates.
- Click on the magnifying glass on the Telegram node to read the log to read the details about how the Node ran.
- Take a screenshot of your Telegram setup node as well as your test log after running yout Telegram node.

For more details on how to integrate Telegram with Make.com, refer to the [Make.com Telegram Guide.]

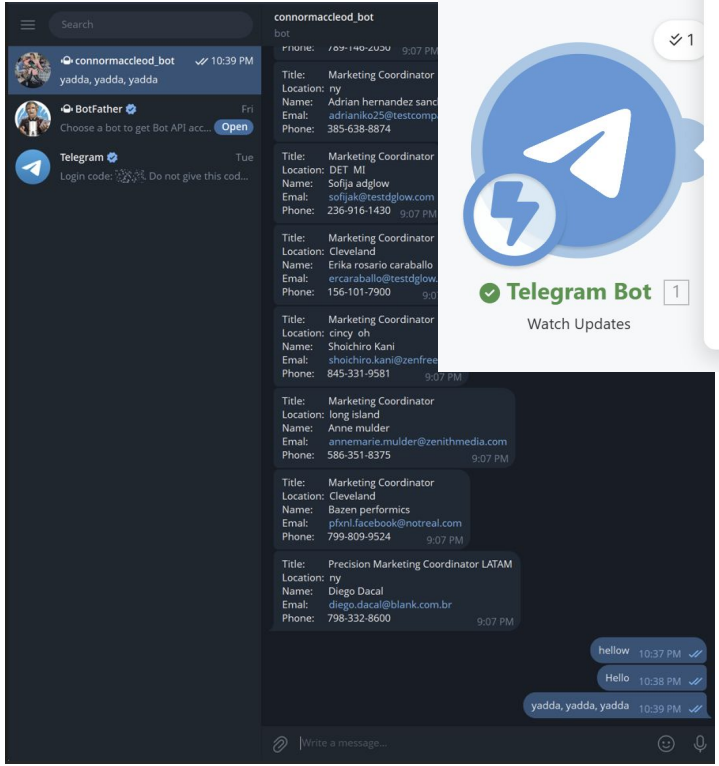


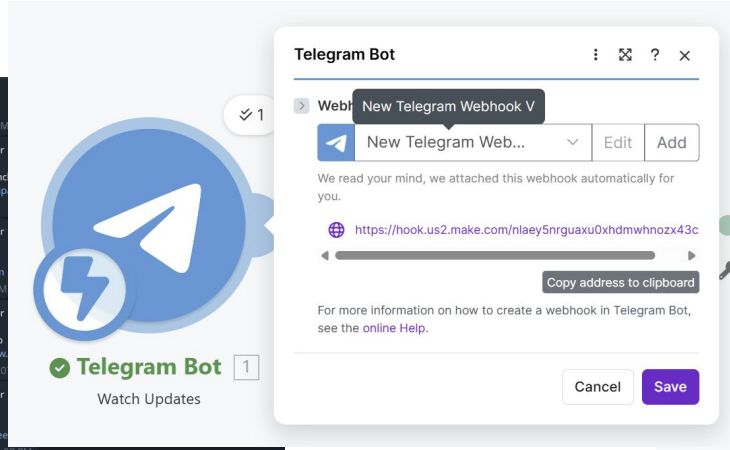


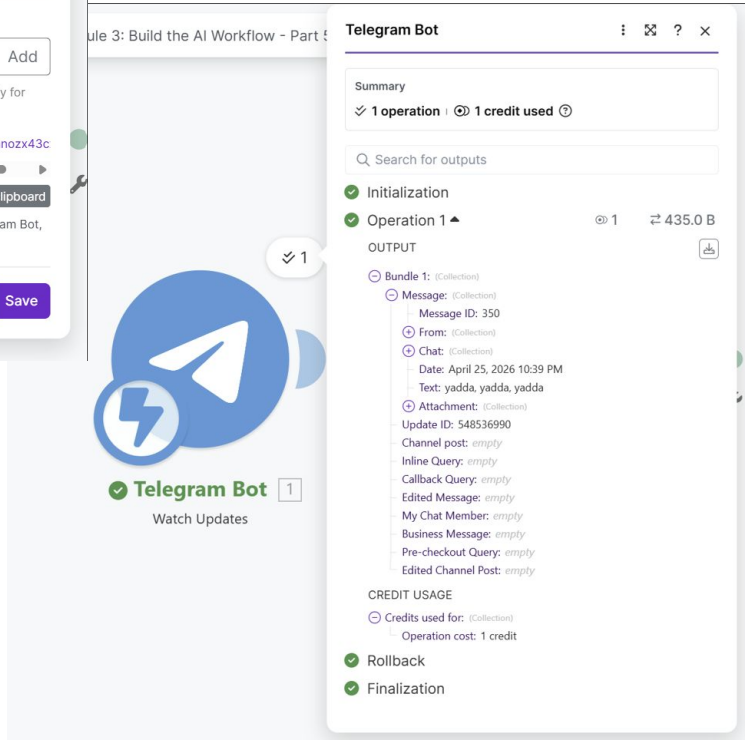


© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# COMPLETE: Telegram setup in Make.com



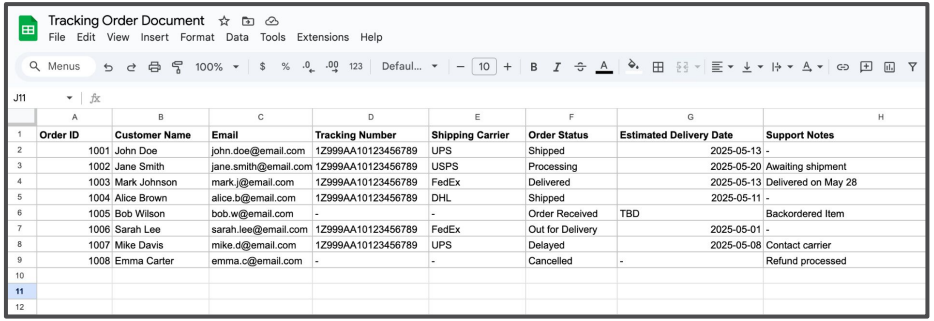




# STEP 3: Create and configure Google Sheets

1. **Make a copy of this** [Google Sheets Tracking Order Document]

   This sheet contains the following order data:
   - Order ID
   - Customer Name
   - Order Status
   - Estimated Delivery
   - Tracking Number
   - Shipping Carrier



| | Order ID | Customer Name | Email | Tracking Number | Shipping Carrier | Order Status | Estimated Delivery Date | Support Notes |
|---|---|---|---|---|---|---|---|---|
| 2 | 1001 | John Doe | john.doe@email.com | 1Z999AA10123456789 | UPS | Shipped | 2025-05-13 | - |
| 3 | 1002 | Jane Smith | jane.smith@email.com | 1Z999AA10123456789 | USPS | Processing | 2025-05-20 | Awaiting shipment |
| 4 | 1003 | Mark Johnson | mark.j@email.com | 1Z999AA10123456789 | FedEx | Delivered | 2025-05-13 | Delivered on May 28 |
| 5 | 1004 | Alice Brown | alice.b@email.com | 1Z999AA10123456789 | DHL | Shipped | 2025-05-11 | - |
| 6 | 1005 | Bob Wilson | bob.w@email.com | - | - | Order Received | TBD | Backordered Item |
| 7 | 1006 | Sarah Lee | sarah.lee@email.com | 1Z999AA10123456789 | FedEx | Out for Delivery | 2025-05-01 | - |
| 8 | 1007 | Mike Davis | mike.d@email.com | 1Z999AA10123456789 | UPS | Delayed | 2025-05-08 | Contact carrier |
| 9 | 1008 | Emma Carter | emma.c@email.com | - | - | Cancelled | - | Refund processed |

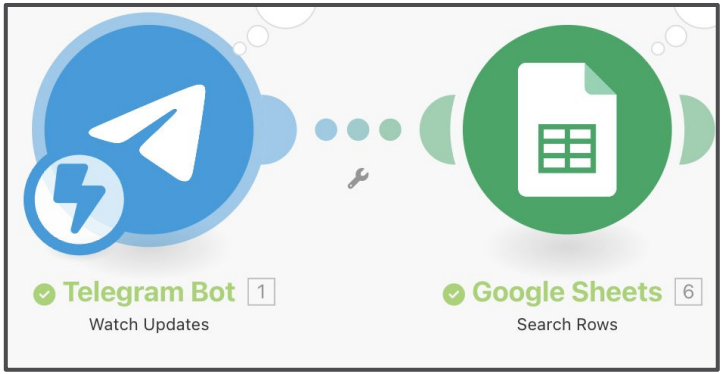
2. **Ensure you can share the Google Sheet with Make.com**
   - Click the **Share** button on your Google Sheet to ensure you can provide access to Make.com
   - When sharing, select **Anyone with the link can view**
   - This allows Make.com to retrieve and update data from the sheet when you add it to Make.com

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# STEP 3: Create and configure Google Sheets

**3. Authorize Google Sheets in Make.com**

- In Make.com, add the **Google Sheets** app to your scenario. Look for **+** in your module next to Telegram module or on the bottom and choose Google Sheets.
- Click on the **Google Sheets** module and select **Search rows**.
- Sign in with your Google account and authorize Make.com to access your Google Sheets.



For more information on creating and sharing Google Sheets, refer to the [Google Sheets Help Center.]

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

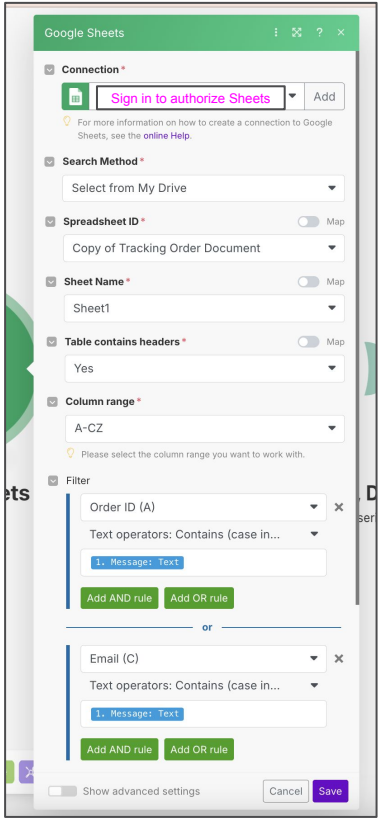
# STEP 3: Create and configure Google Sheets

**4. Complete the set up with the input fields:**

- **Connection:** Sign in with your Google account and authorize Make.com to access your Google Sheets.
- **Search Method:** Choose 'Select from My Drive' to browse within your drive
- **Spreadsheet & Sheet:** Pick your Tracking Order file and the Sheet
- Confirm that '**Table contains Headers**' is **Yes** and '**Column Range**' are auto-picked to **A-CZ**.
- **Filter:** Map the Sheets 'Order ID' **contains (case insensitive)** to Telegram's Message>Text. Then, choose the **OR** rule. Map the Sheets 'Email' **contains (case insensitive)** to Telegram's Message>Text.

  *-> This means when the Telegram 'Text' field matches either the order ID or Email, then Sheets would filter the appropriate row for ChatGPT to process further.*

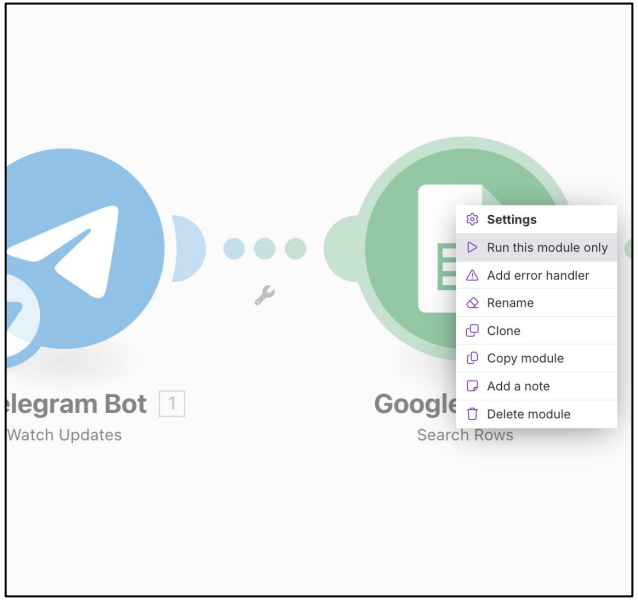
  *Tip: Remember! At the time of testing, your telegram input should be either order number like 1001, 1005 etc or email like [mike.d@email.com](mailto:mike.d@email.com) and NOT "where is my order 1001 or "pull my order info with mike.d@email.com"*



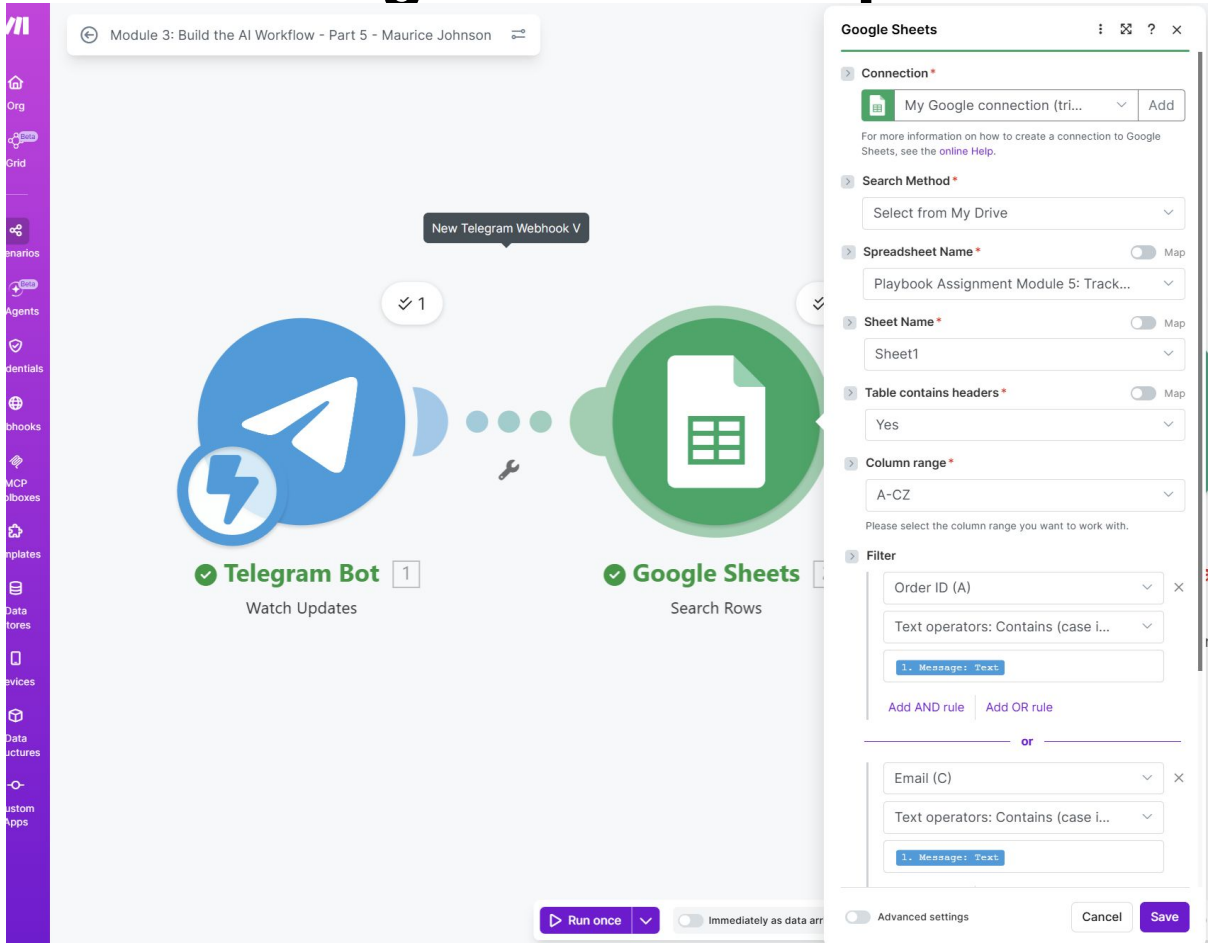
# STEP 3: Create and configure Google Sheet

**5. Test the Google Sheets Integration**

- Click **Save** to complete the setup.
- Right-click and **Run this module only**. Make sure you are able to view your newly created Google Sheet and confirm it is connected properly.

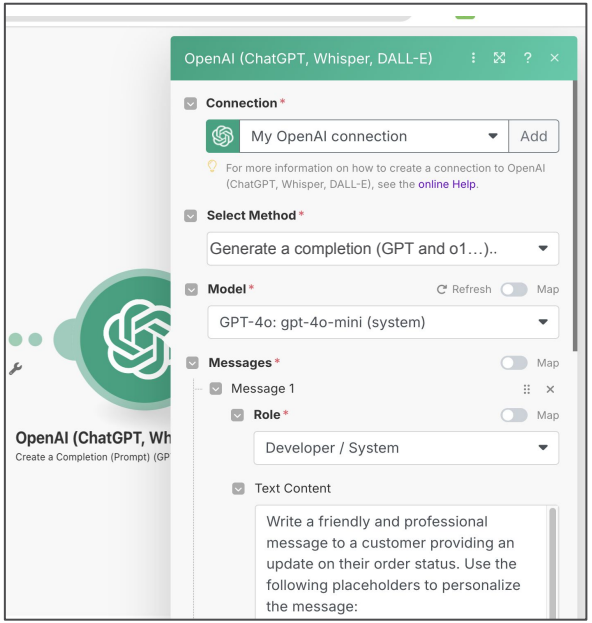


# COMPLETE: Google Sheets setup in Make.com



# STEP 4: Configure OpenAI (ChatGPT) in Make.com

1. **Connect OpenAI to Make.com**
   - In Make.com, click the **+** button to add a new module
   - Search for **OpenAI** in the app search bar
   - Select the **OpenAI** app, then click **Add**
   - Sign in to your OpenAI account and authorize Make.com to connect to your OpenAI account.
   - Use the API key you were given as part of this course. If you have not received this yet, please contact your Learner Success Advocate.



2. **Generate a Completion Module**
   - After adding OpenAI, choose the **Generate a Completion** action.
   - Select your **Model** (we recommend using gpt-4o-mini).
   - Under **Messages**, click **Add Message** and do the following:
     - Set the Role to: Developer/System
     - In the Content field (what appears when you click **add message**), enter the prompt that tells ChatGPT what kind of message to generate. See the next slide for additional details.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

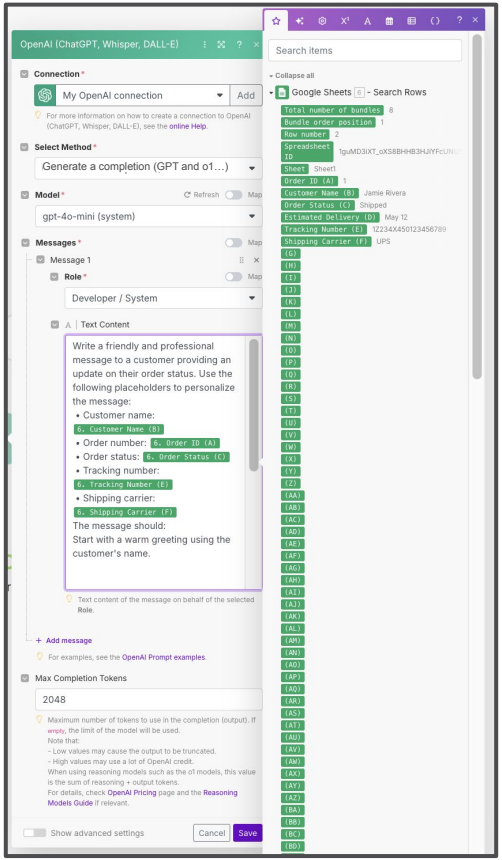
# STEP 4: Configure OpenAI (ChatGPT) in Make.com

In the **Content** field, write a message that instructs ChatGPT to generate a customer-friendly order update using placeholder values.

**Your system prompt should:**

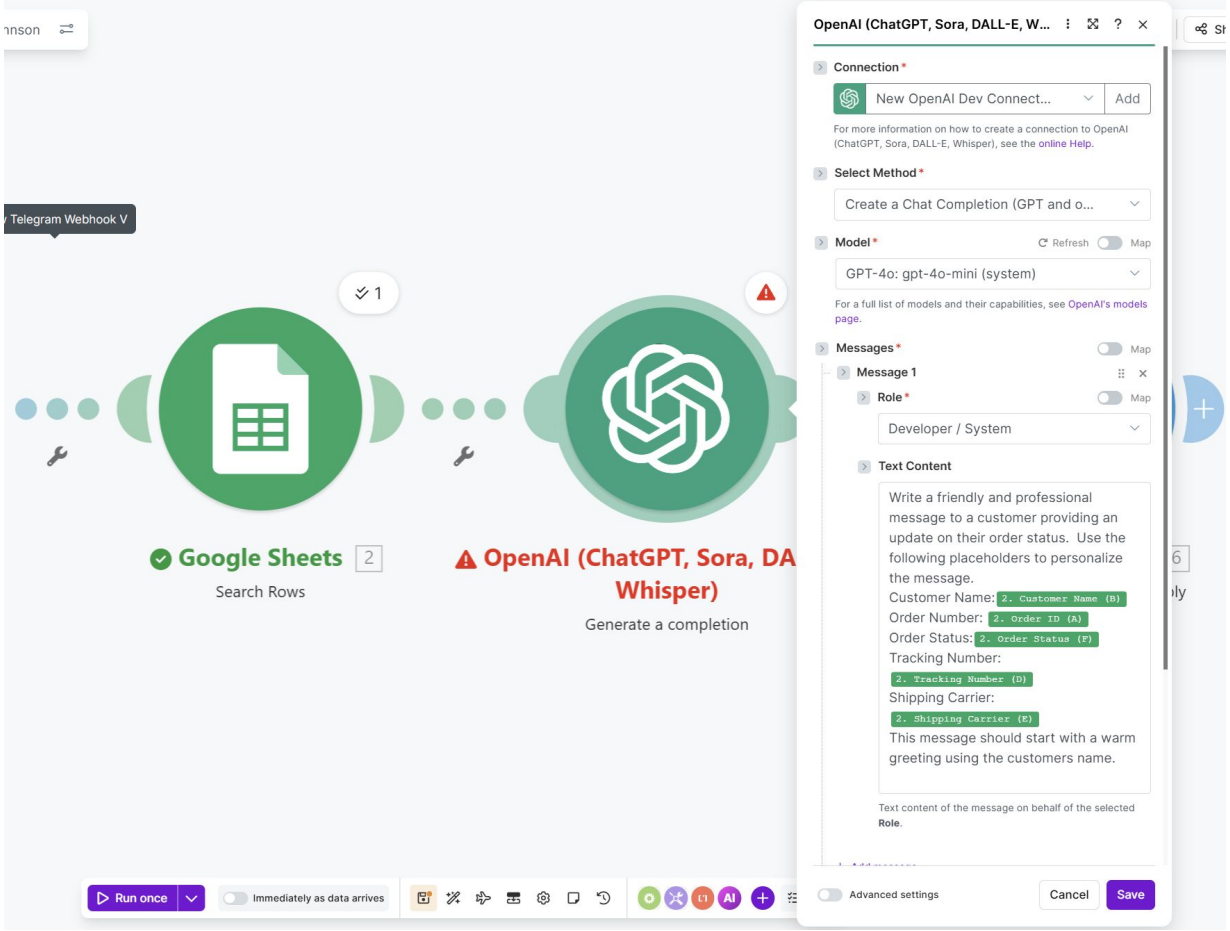
- Tell ChatGPT to write a message **to a customer**
- Use these placeholders to insert dynamic info from the spreadsheet:
  - {CustomerName}
  - {OrderNumber}
  - {OrderStatus}
  - {TrackingNumber}
  - {ShippingCarrier}
- Make sure the message:
  - Starts with a warm greeting using the customer's name
  - Clearly shares the order number and current status
  - Includes tracking details if the order has shipped
  - Closes with a supportive, helpful tone

**Tip:** You're writing instructions to the AI, not the final message itself.

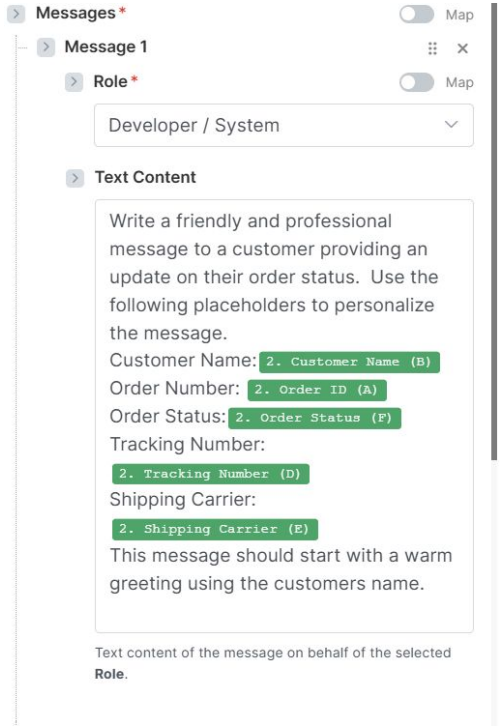


© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# COMPLETE: OpenAI setup in Make.com



# COMPLETE: Order status message



Write a friendly and professional message to a customer providing an update on their order status. Use the following placeholders to personalize the message.

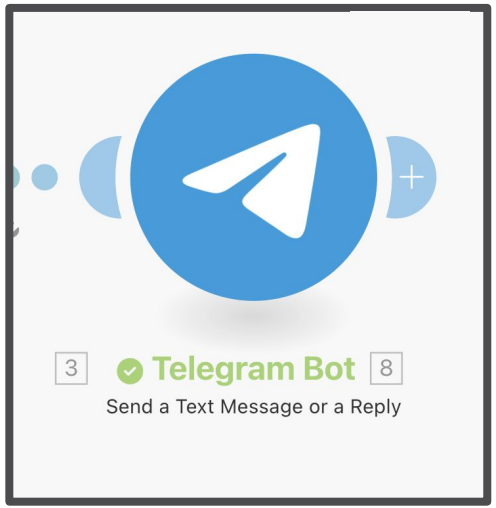
Customer Name:{{2.`1`}}
Order Number: {{2.`0`}}
Order Status:{{2.`5`}}
Tracking Number:{{2.`3`}}
Shipping Carrier:{{2.`4`}}

This message should start with a warm greeting using the customers name.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# STEP 5: Set up the Telegram “Send a Text Message” module (1 of 2)

1. **Add the Telegram module to your scenario**
   - Click the **+** button after the OpenAI module.
   - Search for **Telegram Bot** and choose **Send a Text Message or a Reply**.
   - This module will allow you to send the AI-generated response back to the user.
   - Continue with step 5 on the next slide.

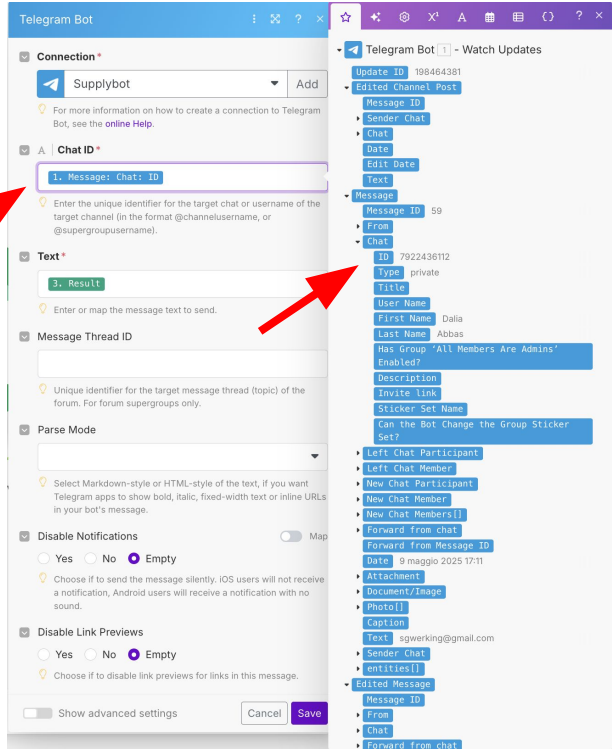


© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# STEP 5: Set up the Telegram “Send a Text Message” module (2 of 2)

## 2. Configure the module settings

- **Connection:** Select the same bot you created earlier, for the first Telegram module in your workflow.
- **Chat ID:** Map your chat ID by going to the drag and drop insert menu. Go to Telegram bot> Chat> ID. Drag this block under Chat ID. This tells Make.com where to send the message.
- **Text:** Map the AI-generated message here. Click into the field and choose the OpenAI response from the previous module (usually labeled something like “Result”).
  - This is how the response generated by ChatGPT gets sent back to the user.
  - *You do not need to fill out Message Thread ID, Parse Mode, or other optional fields for this build.*
  - **Tip:** If your test message doesn’t send, double-check your bot's username and make sure the message content is being passed from OpenAI properly.



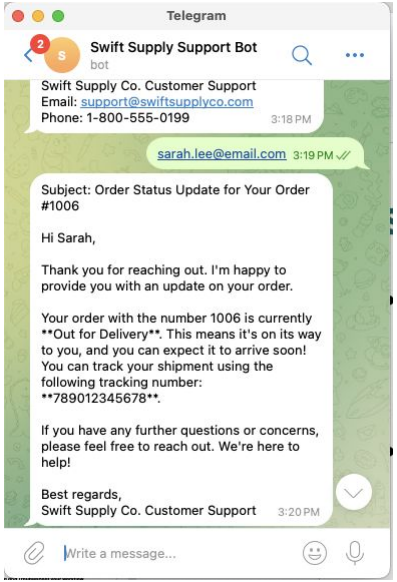
© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# STEP 6: Run and test your workflow

1. **Run and test**
   - Now that all of your nodes are connected and all your credentials have been inserted, run your workflow.
   - Once you've hit run, send a message through your Telegram bot to get your automation in motion.
   - This message can either be a customer's number, found under the order ID column in the the Google Sheets Tracking Order Document or their email address from under the email column.
   - Essentially, what is happening is the customer is asking for information on their order by providing either their order ID or email address. They should then get an order status update.
   - Did your automation run successfully? Take a screenshot of your nodes after you ran your automation to document your testing.

**Entering the order ID**

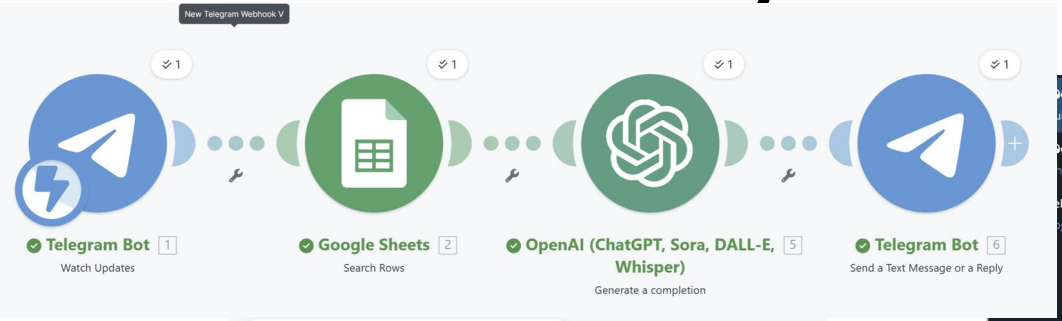
**Entering an email address**

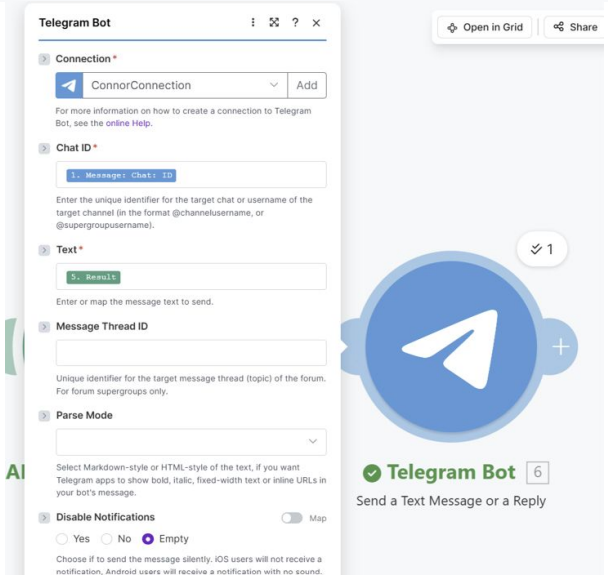


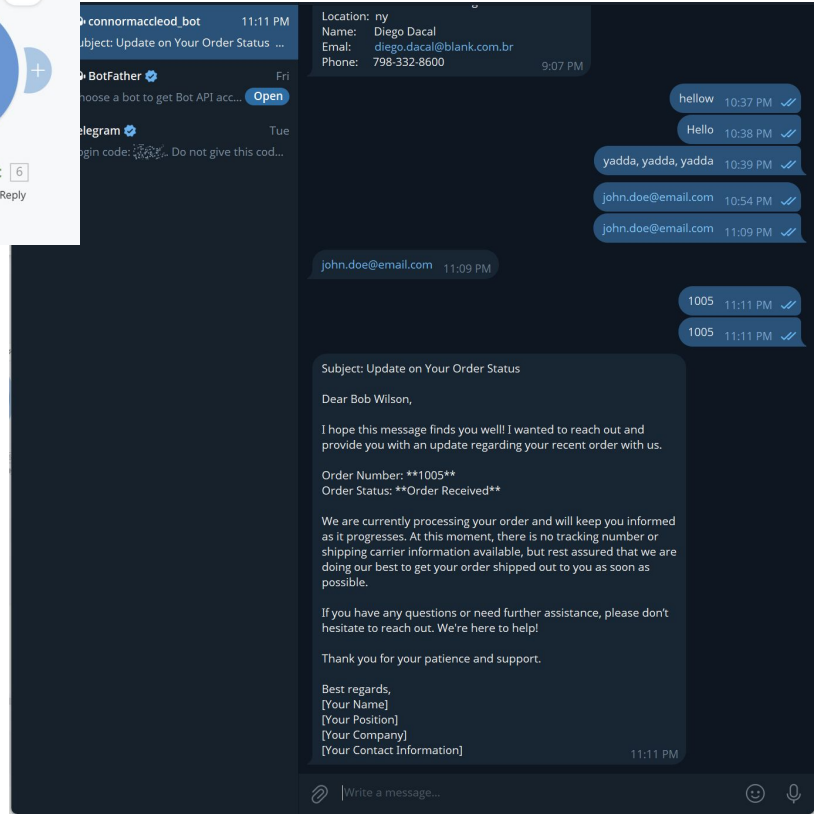
**Tip:** Remember! At the time of testing, your Telegram input should be either order number like 1001, 1005 etc or email like mike.d@email.com and NOT "where is my order 1001 or "pull my order info with mike.d@email.com"

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# COMPLETE: Run and test your workflow







# STEP 6: Debug and troubleshoot your workflow

**Did your automation run into errors? If so, be sure to double-check the following items:**

- ❏ Credentials for each node
- ❏ Data-mapping for each node
- ❏ Testing inputs

Check out the chart below to read through some common errors and what to do if you are noticing one of these specific issues with your automation.

| Symptom | Likely cause | What to check |
|---|---|---|
| Telegram reply is blank | OpenAI module not outputting content | Check mapped field and prompt |
| Error on Telegram send | Incorrect Chat ID | Double-check username with @ |
| Nothing triggers | Telegram "Watch Updates" not connected | Try sending a message to bot and checking logs |
| Your output says "Sure! Please provide the order details such as Order Number, Customer Name, Email, Estimated Delivery, and Order Status, so I can assist you with your inquiry about your order status." | We are running a simplified workflow and so it cannot process a sentence but only 'Search Rows' with the input | Your test input on telegram should not be a sentence but only ORDER ID or EMAIL. Remember the formula we have set up as a vlookup on excel. Test your workflow with '1004', '1003', 'alice.b@email.com' etc. |

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# COMPLETE: Debug and troubleshoot your workflow

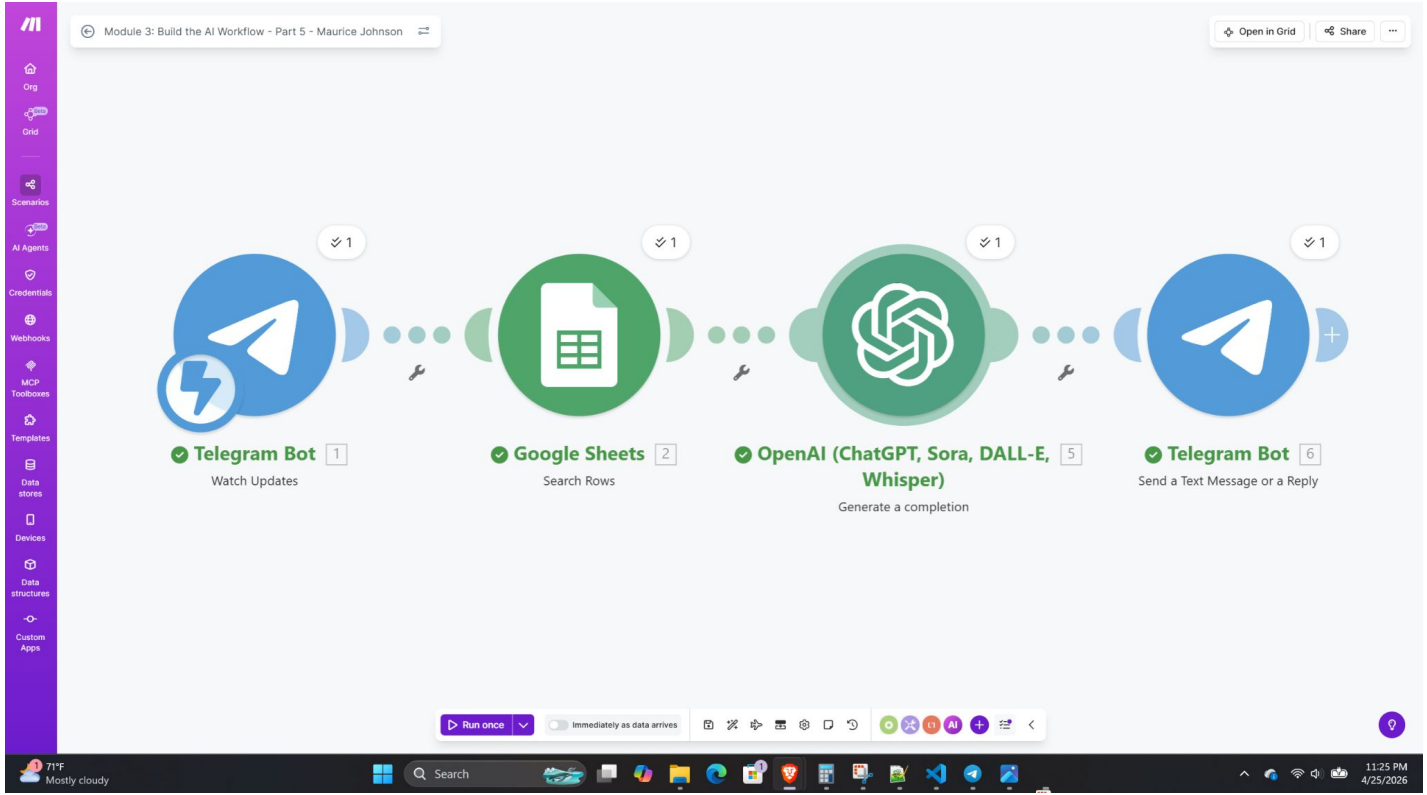
What bugs or errors did you find the first time you ran your automation, if any? What steps did you take to debug your automation?

| Symptom | Likely cause | What to check |
|---|---|---|
| Not so much a bug, but it looks as if the response is missing some values.<br><br>Reference Telegram Screen Shot previous Page | OpenAI Prompt | It is seeking the following values<br>[Your Name]<br>[Your Position]<br>[Your Company]<br>[Your Contact Information] |

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# COMPLETE: Final automation

Please include a screenshot of your final automation in Make.com, after any debugging or troubleshooting below.



© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# INSTRUCTIONS: Reflection

Record your thoughts about this process including what you needed to do to obtain the desired results on the next slide.

- What challenges did you face in building your workflow?
- How did the tool integration go?
- What troubleshooting steps did you have to take?
- What did you learn about building AI-powered automations?

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# COMPLETE: Reflection

Record your thoughts about this process including what you needed to do to obtain the desired results in the space below.

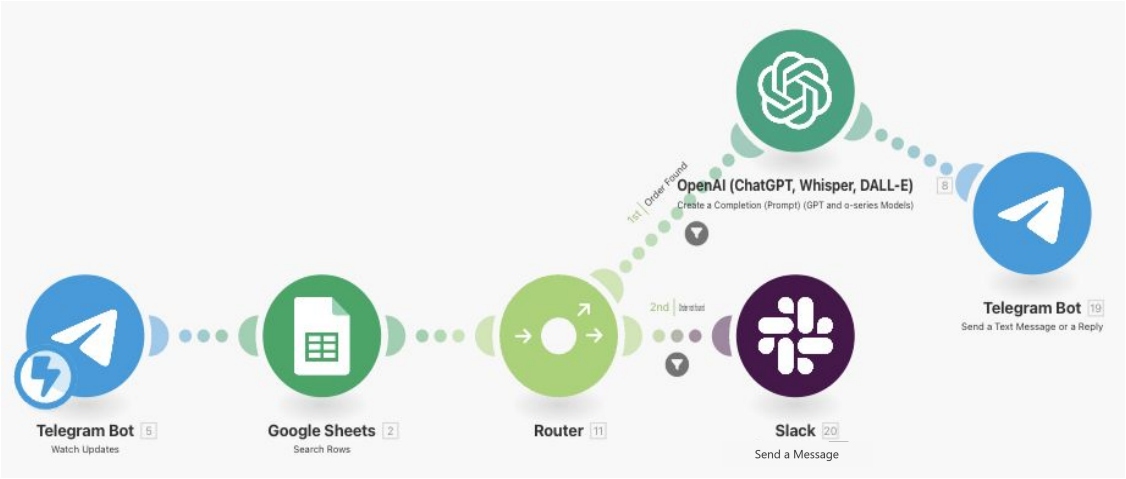
| | |
|---|---|
| What challenges did you face in building your workflow? | Not to many challenges. Having worked the Novatech Workflow during the Module 3 coursework worked out most if not all issues that I might have faced with this Playbook Assignment.<br><br>I did find that the hardest connection actually was the OpenAI Agent. Not so much the configurations themselves, but the difference in version of Make.com and OpenAI ChatGPT. After some research I guess both have been changing fairly rapidly over the course of this year. |
| How did the tool integration go? | Most were not too bad, once again out of all Integrations it was the OpenAI Agent that initially proved to be the most difficult.<br><br>I also ran out of credits with OpenAI ChatGPT, but I was able to resolve that by throwing 50 bucks at it. I guess I might also add. I did not use the Docker Image or Docker Desktop. I know that was referenced in this module. |
| What troubleshooting steps did you have to take? | Most if not all testing was performed straight from Telegram and there were not a lot of scenarios to conditionally test against besides the Order ID and Email Address. |
| What did you learn about building AI-powered automations? | What I have learning is really pretty cool. I am also learning that no sooner am I ramping up on the technology, some one has come out with something newer or presumably better. Finding it a little difficult to keep up at this moment in time, but I am doing my best. |

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# OPTIONAL: Bonus

Built out your automation with ease? Here is an additional challenge task if you'd like to take your automation to the next level:

- Add a human-in-the-loop piece
  - Add a Router to send a message to the right person in Slack when an order is not found



© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# OPTIONAL: Bonus

Paste a screenshot of your Make.com workflow after adding a human-in-the-loop piece using a router and Slack.

# INSTRUCTIONS: Using your own scenario

If you choose to build an AI workflow according to your own scenario, follow these instructions:

You'll build and document a functional workflow connecting at least two tools (Slack, Telegram, Google Sheets, or any other tool) using one of the no-code tools you learned how to use (Make.com or n8n). You'll submit a demo video or annotated screenshots for peer and instructor feedback.

Here's what you need to do:

1. **Define your project:** Describe the project you want to work on. This should include the problem you're solving, and the documented workflow you want to build. This can be used from playbook assignments 1 and 2.
   a. Include your process map. Your automation does not have to follow your process map exactly, but for purposes of this assignment, it can be a simplified version of the workflow you mapped out.
2. **Document the workflow configuration:** Document the setup steps for the tools you decide to use (i.e., Telegram, Google Sheets, or OpenAI in Make.com or n8n).
3. **Build the automation:** Use the no-code tool of your choice (Make.com or n8n) to build out your simplified workflow. To document your finished prototype, use Loom.com to create a short, 5 minute walkthrough of your automation in action.
4. **Reflect on the process:** Document your experience, including any challenges you encountered and how you overcame them.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# REVIEW: AI-Powered automation building tips

**Instructions:** Read the following tips to recall best practices covered throughout the module on building your AI-powered automated workflow to prepare for your own custom build.

**Tips:**

- Include your process map so your trigger, action, and output are clearly defined.
- You don't need to match your map exactly - the goal is to practice building and learn how to integrate tools (especially using the OpenAI API key).
- Think of this as a first prototype of your final workflow - you'll have two weeks to refine and submit the final version.
- Your LSI (Live Session Instructor) and LSA (Learner Success Advocate) may not be able to fully troubleshoot custom connections or files tied to your company or data.
- Stick to the core free tools provided in this course - going beyond them makes it harder for instructors to support everyone fairly.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# REVIEW: Deliverables

For this playbook assignment, you will create the following deliverables:

1. **Context for your project: What is the problem you are trying to solve?**
   Provide a process map for your workflow.
2. **Screenshots and/or a Loom walkthrough of you workflow configuration:**
   Document the setup steps for Telegram, Google Sheets, OpenAI, or any of the other tools you decide to use in Make.com or n8n.
3. **A screenshot and/or Loom walkthrough of your final workflow in Make.com:**
   Provide a screenshot of your workflow.
4. **Testing Results:** Provide screenshots, logs, or a video walkthrough from testing different user inputs, including successful order tracking and error cases where no order is found.
5. **Reflection:** Document any challenges you encountered while building and testing the workflow. What did you learn about integrating different tools (Telegram, Google Sheets, OpenAI)?

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# INSTRUCTIONS: Milestones

Though the goal of an automation is to get it up and running, getting it to work is only one piece of the puzzle.

**Here is a checklist of each item you need to complete to consider this assignment complete.**

- ❏ Context for your project
  - ❏ Include the problem you're trying to solve and your process map
- ❏ Workflow scenario builder includes all your nodes
- ❏ Credentials inserted into all your nodes
- ❏ OpenAI integrated*
  - ❏ API key inserted and works (as listed above under credentials)
- ❏ Testing
  - ❏ Tested your workflow and showed that each node works
- ❏ Debugging and troubleshooting[if there are errors]
  - ❏ Looked into credentials and data mapping to configure errors
- ❏ The automation works and the project is complete

***Note:** You should have received your OpenAI API credentials in the course Learning Management System. If you have not accessed your credentials, please contact your Learner Success Advocate.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# OPTIONAL: Context for your project

Optional context building slide. This slide is not required but will help you with the rest of this assignment.

Include the following details:

- The problem you're trying to solve
- The documented workflow you want to build and the process map
    - These can be used from playbooks assignments 1 and 2

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# COMPLETE: Screenshots of your workflow configuration

Include screenshots or a link to a Loom video walkthrough of the tools you've set up in Make.com here.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

Your own scenario

# COMPLETE: Your final workflow in Make.com

Take a screenshot of the prototype of your workflow in Make.com and paste it below.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

Your own scenario

# COMPLETE: Testing results

**Instructions:** Test your workflow and add any documentation you can (screenshots or a Loom video walkthrough) to demonstrate your testing. Use additional slides if necessary. Use text as needed.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# INSTRUCTIONS: Reflection

Record your thoughts about this process including what you needed to do to obtain the desired results on the next slide.

- What challenges did you face in building your workflow?
- How did the tool integration go?
- What troubleshooting steps did you have to take?
- What did you learn about building AI-powered automations?

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# COMPLETE: Record your thoughts

Record your thoughts about this process including what you needed to do to obtain the desired results in the space below.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# OPTIONAL: Bonus

Built out your automation with ease? Here is an additional challenge task if you'd like to take your automation to the next level:

- Add a human-in-the-loop piece in your automation.

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# OPTIONAL: Bonus

Paste a screenshot of your Make.com workflow after adding a human-in-the-loop piece.

# COMPLETE: AI use in the playbook

Because this course centers on AI-powered workflows, we support your use of AI as taught and practiced in the course. Using AI tools and strategies isn't just allowed, it is required to complete assignments as interested to show your understanding of the material.

Per the course AI guidelines you are required to indicate where and how AI tools were used in your assignments (e.g., idea generation, drafting, proofreading, etc.). **Please complete the following:**

| Question | Answer |
|---|---|
| Did you use AI when completing this assignment? | |
| If yes, explain how you used AI tools to assist you in completing the assignment. Include where you used it. | |

© 2026 Ziplines Education | Proprietary and Confidential | Do not duplicate or distribute without written permission.

# INSTRUCTIONS: SUBMIT IT

**Review** each slide and make sure you have completed the entire assignment
**Set share settings** so **anyone with the link** can view the document
**Access** the correct assignment submission page in the Learning Management System
**Copy/Paste** the link to your assignment in the system by the due date
**Confirm** the assignment was accepted by the Learning Management System

**How to set share settings:**

- Click “Share” in the upper right corner
- Under “General Access”, select “**anyone with the link”**
- Click “Copy” and then “Done”
- Paste the link in the correct assignment submission page in the LMS
