

AI Automation Playbook

CREATE GUARDRAILS FOR THE AI WORKFLOW

**Create an AI governance &
change management plan**

INSTRUCTIONS: GETTING STARTED

Complete your assignment on the following slides

Set the share settings so **anyone with the link** can view the document

Submit the link to this deck in the Learning Management System

Tips for completing your assignment:

- Rename your copy and add your name to the file
- Example: Playbook Assignment: Automation opportunity scan – MRogers
- Read each slide carefully to ensure you complete the assignment successfully
- Review your playbook before submitting for accuracy, grammar, and spelling
- Keep in mind the Guidelines for AI Use in the Course when completing this assignment

[Watch this video for a quick demo](#)

INSTRUCTIONS: Introduction to the assignment

For this playbook assignment, you will **create an AI governance and change management plan.**

You will choose either our provided scenario, Swift Supply Co. or create your own. If you choose your own, you will pick a workflow to use from your company, a past workplace, or a business context you're familiar with.

Option A: Use the provided scenario: Swift Supply Co. – As with past playbook assignments, you can use the Swift Supply Co. scenario. If you select this option, follow slides 4–15.

Option B: Use your own scenario – If you already have an automation in mind that you built out during your last playbook assignment, you can also apply that here and create an AI governance and change management plan for that workflow. If you choose this option, follow slides 16–26 .

COMPANY OVERVIEW: Swift Supply Co.

Swift Supply Co. has implemented an AI-powered chatbot and automation system to handle order tracking questions. Leadership is concerned about AI governance, specifically data privacy, and ensuring a smooth transition for employees working alongside AI.

Your task is to **develop an AI governance framework** to ensure the chatbot operates securely and transparently while maintaining human oversight where necessary. Additionally, you will create a **brief change management plan** to align key stakeholders, communicate the AI's role, and support adoption.

REVIEW: Steps for the Swift Supply Co scenario

Read this overview slide from the module 1 playbook to refresh on Swift Supply Co's current situation:

The customer service team is overwhelmed, leading to delayed responses, frustrated customers, and lost business. Agents spend over 40% of their time handling repetitive inquiries, such as order status instead of focusing on complex customer needs. Here's how the customer service team at Swift Supply Co. currently handles customer inquiries about their orders.

1. Inquiry received (1-2 minutes)

- A customer submits a question through email, phone, live chat, or a web form.

2. Inquiry routed (5-10 minutes)

- A team member manually checks the inbox or platform and assigns the inquiry to an available agent.

3. Agent reviews request (3-5 minutes)

- The assigned agent reads the message and determines the type of inquiry (order status, return request, product availability, complaint, etc.).

4. Agent searches for information (5-12 minutes)

The agent looks up information across multiple systems:

- Order tracking system
- Inventory system
- Policy documentation
 - This often requires switching between tabs, copying/pasting order numbers, or checking with other departments.

5. Response drafted and sent (5-8 minutes)

The agent writes a custom reply, often using boilerplate responses or templates. They may manually attach tracking links or summarize product availability.

6. If complex, escalate (varies: 3-10+ minutes)

If the request is complex (e.g., complaint, return issue), the agent forwards it to a supervisor or escalations team via email or phone.

Note: These time ranges are approximations.

REVIEW: Risk analysis, next steps (Swift Supply)

Swift Supply Co. launched an AI chatbot to automate responses to customer inquiries about order details. While the chatbot should result in faster, more accurate responses to customers, it also changed many job responsibilities at Swift. **Swift ran a risk analysis, and the following concerns emerged:**

- Data privacy (handling sensitive customer information)
 - Remember the following information is collected: Order ID, Customer Name, Email, Tracking Number, Shipping Carrier, Order Status, Estimated Delivery Date, Support Notes
- Transparency (ensuring customers understand when they are interacting with AI vs. a human)
- Human oversight (who monitors and intervenes when AI makes errors)
- Employee acceptance of the technology

To address these concerns, your team must create:

1. **An AI governance framework** that establishes secure, and effective AI operations.
2. **A change management plan** that supports successful adoption by employees and leadership.

COMPLETE: Define governance scope (swift supply)

Define the governance policies for the AI chatbot by answering the questions on the next few slides. First, **define governance scope** by answering the questions below.

Question	Answer
What needs will the chatbot meet?	Seamless real-time interaction with respect to Customer Order Details, Inventory, and Return Status without downtime and/or waiting period. This in effect reduces the Mean)to Resolution(MTTR)
How does the chatbot align with business objectives and values?	It aligns well by introducing the following benefits. 1. Reducing the Customer Support Team Stress. 2. Reducing the chaotic work environment with respect to context switching 3. Improves Customer Support Team morale. 4. Customer retention and satisfaction to increase due to real-time response and order status.

COMPLETE: Assign governance roles and responsibilities (swift supply)

Question	Answer
Who is responsible for reviewing AI-generated responses for accuracy and privacy?	This would depend upon the organizations infrastructure/eco-system If the organization has a Oversight Committee dedicated to Artificial Intelligence this would be in their wheelhouse. If not, then it would fall to the project team org chart. Key Stakeholders 1. Product Manager 2. Project Platform and/or Principle Engineer 3. Project Tech Lead 4. Senior AI Consultant
How often should AI decisions be reviewed and adjusted?	At first release or Go-Live Date, monitoring them in real-time with an observational dashboard would be most appropriate, with daily and/or weekly audit meetings After a month it could be ratcheted down to weekly audits with reference to dashboard analysis, audit logs, and a generated report on AI decision making, results, and customer response. For example how many times did customer intervene? How many times were items escalated? Were the customer's satisfied with the results.

COMPLETE: Address data privacy and security (Swift Supply)

Question	Answer
What customer data does the AI collect, and how is it stored securely?	The AI should store zero customer data, outside of the session. There might be short-term caching for the session itself, but should be cleared at the end of session. The only time data should be stored, would be in the event the customer escalates the session to a live support agent. Then it would be the agent entering customer information for follow up if necessary. Or it could simply be notes added to their order.
How should Swift Supply Co. ensure transparency for AI interactions?	A number of thoughts come to mind. 1. As a part of the greeting, let the customer know up front that they are interacting with a Chatbot for their session. 2. At any time the customer is dissatisfied with the chat session they may opt for a live customer support agent. 3. Have a brief survey at the end of the session asking to participate in a one or two question survey on their experience.

COMPLETE: Establish AI decision-making and oversight rules (Swift Supply)

Question	Answer
When should AI automate a decision vs. when should a human be required to review?	The Human in the Loop should be the one to both review and automate any decision Artificial Intelligence makes. Not to sound like a cynic, but AI should never be allowed to automate it's own decision making process. At least at these early stages in its industrial life.
What override mechanisms should be in place for inaccurate responses?	AI Inaccurate Responses would either be observed in real-time, auditing, at the observational dashboard, or quite possible in workflow logging, or a customer could come forth with a complaint. It is best to have an Artificial Intelligence Oversight Committee and/or Project Team Lead, Product Manager, Platform Engineer, and Senior AI Consultant with Key Stakeholders to field inaccuracies. With respect to Automation Workflows, 'Trigger Events' can be established with 'Conditional Logic' to integrate this level of approval for override. This would involve the 'Human in the Loop' Scenario. A more traditional 'Rules Engine' could be integrated to improve response consistency and accuracy.

COMPLETE: Identify key stakeholders (swift supply)

Now, **create a change management plan** using change management principles to ensure smooth AI adoption among employees and leadership by answering the questions on the next few slides.

Identify key stakeholders by answering the question below.

Question	Answer
Whose roles will be changed by AI adoption, and what concerns might each stakeholder group have?	The largest shift will be the Customer Support Agent. By shifting this level of work to the Chatbot alleviates them from the daily context switching they had become accustom to. In-turn, they could be transitioned into more of a regional customer support or regional account agent role. This role would then become responsible for escalation scenarios, AI Monitoring for their region. They could also find themselves with an opportunity for growth, possibly into sales and return or repeat business by staying in contact with customers. The largest concern key stakeholders will have is, "How does this impact me? How does this impact my department? How will our department benefit from this AI Integration? Do we even need it?" All of course could be fielded through the appropriate level of transparent communication with a focus on continued education/training.

COMPLETE: Communicate the AI vision (Swift Supply)

Question	Answer
What messaging will ensure AI adoption is seen as beneficial rather than disruptive?	You, as a Customer Support Analyst, will be slowly transitioned into more of a regional customer support or regional account agent role. This role would then become responsible for escalation scenarios, AI Monitoring for their region. They could also find themselves with an opportunity for growth, possibly into sales and return or repeat business by staying in contact with customers. Further continued education and training will be paramount for maintaining a competitive edge and marketability. If you decide to pursue this course we will be happy to support you in this transition and are excited to see what the future brings for our organization.

COMPLETE: Plan training and support (swift Supply)

Question	Answer
How will you ensure employees feel empowered rather than threatened by AI?	Ensure them that with a successful integration and probationary phase to determine AI Success. They will then have an opportunity for career growth and further education/training. Dependent upon next quarterly earnings and yes AI's success we could even see an increase in salary or maybe a bonus. Business has yet to decide what this looks like at this time.

COMPLETE: AI use in the playbook (swift Supply)

Because this course centers on AI-powered workflows, we support your use of AI as taught and practiced in the course. Using AI tools and strategies isn't just allowed, it is required to complete assignments as interested to show your understanding of the material.

Per the course AI guidelines you are required to indicate where and how AI tools were used in your assignments (e.g., idea generation, drafting, proofreading, etc.). **Please complete the following:**

Question	Answer
Did you use AI when completing this assignment?	No. But I did use the old fashioned Google Search.
If yes, explain how you used AI tools to assist you in completing the assignment. Include where you used it.	N/A

INSTRUCTIONS: Submit it

Review each slide and make sure you have completed the entire assignment

Set share settings so **anyone with the link** can view the document

Access the correct assignment submission page in the Learning Management System

Copy/Paste the link to your assignment in the system by the due date

Confirm the assignment was accepted by the Learning Management System

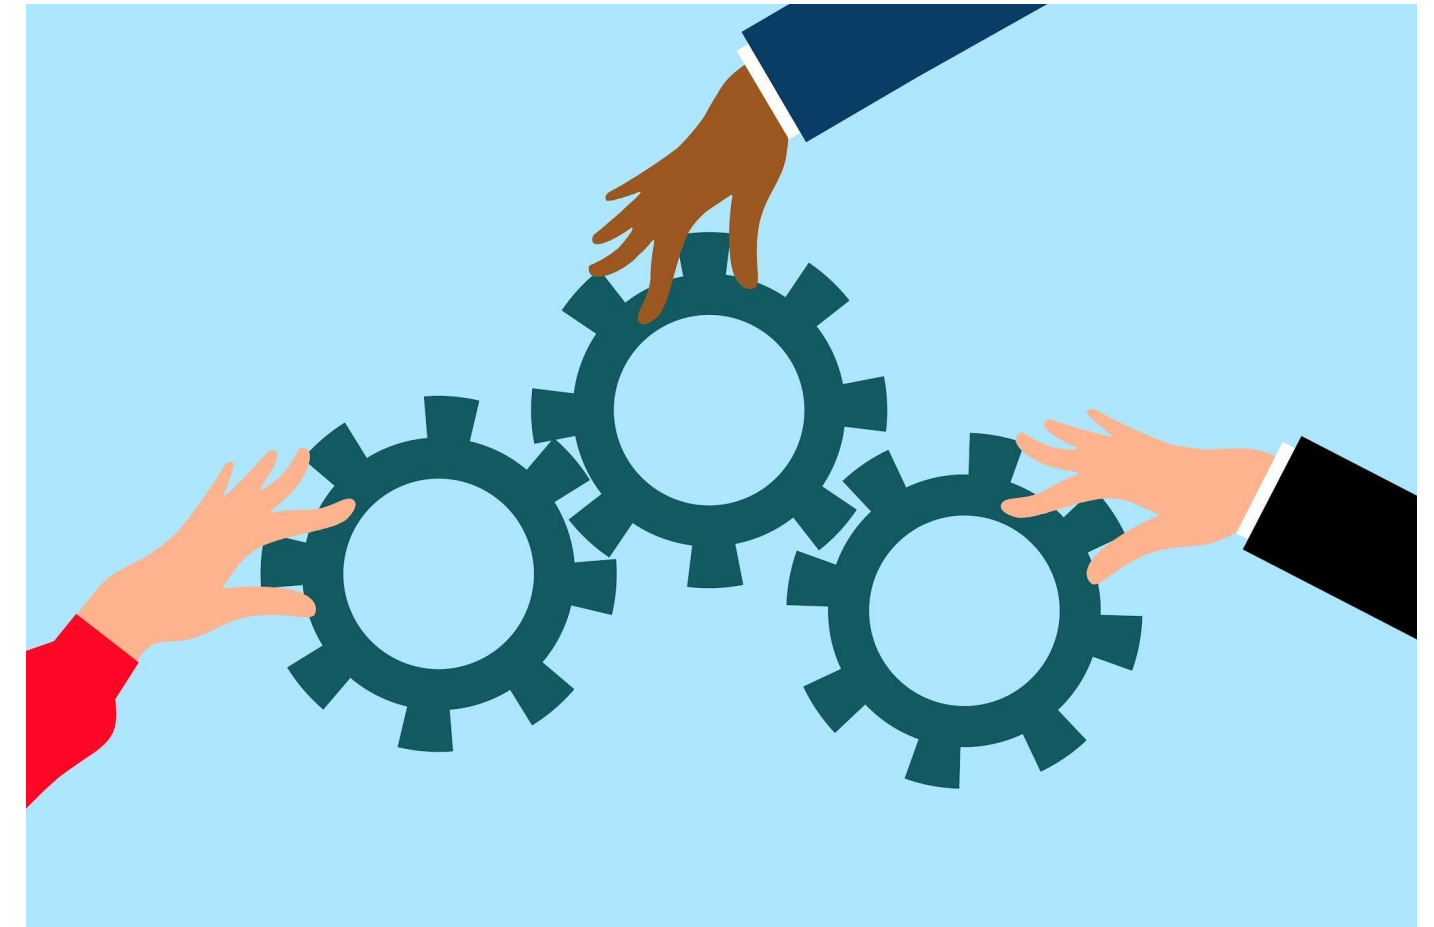

How to set share settings:

- Click “Share” in the upper right corner
- Under “General Access”, select “**anyone with the link**”
- Click “Copy” and then “Done”
- Paste the link in the correct assignment submission page in the LMS
